**Common Module**

In the common module the following subjects will be analysed in depth:

- Management of healthcare units
- Governance of healthcare institutions
- Primary care management
- Economic assessments and quantitative tools for Health Technology Assessment (HTA)
- Regulation and technology market

**Specializations**

Subsequently, participants will be able to choose between the following specializations:

- Clinical-managerial aspects and profiles
- Administration and management
- Coordination and management of primary care and territorial services
- Regulation for the pharmaceutical and medical devices sector
- Assessment of health systems, projects and technologies

**Ways to enrol and registration fee**

With a view to enrolling, you must fill in the application form on the University website: [https://delphi.uniroma2.it/](https://delphi.uniroma2.it/) (student area).

The registration fee, payable in two instalments, is equal to 3,000 euros.

The Master's Degree allows to obtain 60 CFU (University Training Credits) and, for health professionals, the exemption from the CME training obligation for the current year (CNFC deliberation of July 17, 2013).

Department of Economics and Finance (DEF)
Via Columbia, 2 00133 Roma - Italia
C.R.E.A. Sanità
Piazza A. Mancini, 4 - int. G11
00196 Rome - Italy
The 2nd level Master’s Degree in Health Economics and Management, organised by the Department of Economics and Finance (DEF) of the University of Rome “Tor Vergata” in collaboration with the Centre for Applied Economic Research in Health (C.R.E.A. Sanità), aims at providing and updating theoretical and practical skills useful for managing health services and also usable in public and private health units and companies. Dedicated modules allow to specialize in specific areas of interest.

Target participants and admission requirements
The Master’s Degree is targeted to those who have a Specialist or Master’s Degree and to those who have an old-system Bachelor’s Degree in Medicine and Surgery, Nursing and other healthcare professions, Economics, Law, Political Science, Statistical Science. The Master’s Board may assess whether degrees in other disciplines are suitable and eligible for being admitted to the Master’s Degree. The main job and career opportunities are connected to managerial roles, but also to roles of responsibility within public and private healthcare units.

Teaching Methods
The lessons are delivered remotely and will alternate with face-to-face meetings through a blended e-learning mode, thus combining learner comfort and training efficacy. The distance lessons can be followed using PCs, tablets and smartphones, 24 hours a day and for an unlimited number of times. The platform makes it possible to consult the teaching and research material (documents, slides, videos, etc.), as well as to carry out exercises and self-learning tests. There will be 7 face-to-face meetings in Rome held in the period between March and November (approximately one day per month excluding summer periods).

You can view a demo of the educational offer by accessing the online platform: http://creaformazione.docebo saas.com/lms/ (USER: demo - PW: demo16).

The approach is multidisciplinary and features economics, management, epidemiology and health planning, legal aspects and profiles, as well as organisation of healthcare services. The teaching approach combines theory and practice and is aimed at developing problem solving skills. Face-to-face and distance learning is matched by round-table discussion with experts and the analysis of case studies. Lecturers come from the main Italian and foreign Universities, as well as from public and private health sector bodies and institutions.

Training pathway
The training pathway includes a preparatory module designed to bring learners’ basic knowledge to the same level, and a common module in which the fundamental subjects for developing managerial skills are analysed, as well as a specialist module.

The topics will be the following:
• Fundamentals of economics and health policy
• Fundamentals of business economics
• Fundamentals of statistics and epidemiology
• Fundamentals of health organisation, planning and programming
• Fundamentals of health law, regulations and legislation
